PROFESSIONAL EXPERIENCE

Flywheel Digital (formerly Perpetua Labs)

May 2022 - Present

Senior Software Engineer (promoted twice from Junior to Senior)

Toronto, ON, Canada

- Led the technical design and end-to-end backend ownership of an ML-powered budget optimization product that trains on up to 2 years of dynamic campaign data to forecast optimal ad-spend allocation, serving roughly 100 users across several hundred campaigns.
- Designed and built REST and GraphQL APIs in Python (Django) and TypeScript, delivering features end-to-end from backend services through React frontends and authoring API specs to align teams on system contracts.
- Architected backend services on GCP using PostgreSQL and BigQuery, and built data ingestion pipelines and ETL workflows with Airflow to support real-time and batch ad-spend analytics.
- Built internal Django services with React and TypeScript admin tooling used by other teams to manage campaign data and operations, reducing manual work and reliance on external tools.
- Integrated LLM APIs to build user-facing AI features, wrote unit and integration tests with Pytest, and participated in on-call rotations triaging issues across pipelines, API services, and database performance.

TCS Canada

January 2021 - April 2022

Automation Engineer Consultant

Toronto, ON, Canada

- Built and maintained automated test suites for enterprise client projects, covering API and UI testing across cloud-hosted environments.
- Performed manual and automated verification of microservices deployments, ensuring release quality across CI/CD pipelines.

Flipp

May 2019 - August 2019

Software Engineer in Test

Toronto, ON, Canada

- Developed automated test coverage for mobile applications, contributing to QA processes within an Agile team.

Ministry of Education

September 2017 - April 2018

QA Engineer

Toronto, ON, Canada

- Built automated regression test suites using Selenium and supported application monitoring.

EDUCATION

University of Toronto

September 2015 - November 2020

Bachelor's, Software Engineering

PROJECTS

Self-Hosted Home Lab & Network Infrastructure

- Built a self-hosted home lab to run personal services in-house instead of relying on third-party cloud subscriptions, with SMB network storage and automated backups across devices.
- Configured secure remote access over a Tailscale mesh VPN with MagicDNS, keeping internal services reliably reachable regardless of changing local IPs.
- Designed and 3D-printed custom hardware and enclosures, combining hands-on hardware tinkering with networking and home-server administration.

SKILLS

Languages & Frameworks: Python, Django, FastAPI, Flask, Nest.js, Express, TypeScript, JavaScript, React.js

APIs & Databases: REST, GraphQL, API Design, Microservices, PostgreSQL, MySQL, MongoDB, BigQuery

Cloud, DevOps & Testing: GCP, Azure, Kubernetes, Airflow, CI/CD, Jenkins, CircleCI, Git, Pytest

AI & Methods: LLM APIs, AI-assisted development (Claude, GitHub Copilot), Data Analysis, NumPy, Agile
